

Meet your team where they are

Ensure all employee spend is captured in real time, with the right information, by integrating your purchasing process into the systems your team uses every day.

With a first-of-its-kind integration, Teampay brings innovative spend management capabilities to Microsoft Teams. Employees access Teampay directly within Teams, and the conversational UI guides them through the purchasing process — no training required.

The platform enforces spend policy on the fly and tracks purchases in real time, giving finance full control and visibility without slowing employees down.

Within Teams, employees can

Submit and approve purchase requests

Receive payment methods, alerts, and notifications

Upload receipts and pre-code transactions

And you get what you need to stay on track

Proactive controls on all spend, including virtual or physical cards and invoices

Real-time visibility into spend data, directly in Teams

Automated reconciliation into Dynamics 365 or other ERPs
