

A better way to buy on Amazon Business

Teampay's patented distributed spend management platform helps technology-enabled companies proactively manage all types of purchasing, made by anyone, from end-to-end. By **unifying the entire process from request to reconciliation**, Teampay's automated workflows reduce manual work, ensure accurate data, and eliminate the frustration of month-end close.

Teampay integrates with Amazon Business for a seamless buying experience with **proactive controls built in**. Employees are guided through the process, selecting items from Amazon Business and purchasing them with minimal clicks. The integration provides an effortless experience for employees, and Finance is assured that all purchases are made in compliance.

How it works

With Teampay's Amazon Business integration, you can:

Provide an effortless employee experience

Employees have one place to request access to company funds, without having to remember a patchwork of policies and rules. When users need to make a purchase through Amazon Business, Teampay's conversational interface guides them through the buying process, eliminating unnecessary steps or the need to ask the office manager to make a purchase for you.

Ensure compliance

Teampay automatically enforces your spend policy by routing the pre-coded purchase request to the right approvers. Amazon Business Prime customers can provide a more tailored experience by pre-approving items within your catalog, curbing requests for non-catalog spend.

Maximize visibility into all transactions

Teampay gives real-time visibility and insights across all spending, including purchases made through your Amazon Business account. Purchases are automatically uploaded into the general ledger as they happen and are correctly coded, saving the finance team valuable time. With automated reconciliation and visibility into committed spend, your finance teams gain the agility they need to make smarter, and faster, decisions.

With Teampay, employees love the effortless experience, Finance teams have confidence in their numbers, and Procurement teams breathe easy knowing that all spending is pre-approved.

“

We have a mindset of building at pace, and this integration helps us do just that. From start to finish, it's a really slick experience.
