

If you work in the medical industry, you know how challenging it can be to gather and report the necessary data to comply with federal regulations, like the Physician Payments Sunshine Act (2010).

Teampay can help. Teampay is the only platform with built-in controls and automation that make it easier than ever to manage spend and provide detailed reporting, so compliance is a breeze.

Detailed reporting

In seconds you can pull a report of physician payments and even filter to see all payments made to a specific physician. All the data you need is stored and easily accessible in Teampay.

Specific audit trails

Every transaction has a clear audit trail, so you can see who made the purchase, who approved it and which physician received it, as well as view supporting documents.

Proactive policy enforcement

Set your company purchasing policy upfront and let our software automatically enforce rules based on the employee, vendor, amount, and more. If a specific purchase type requires additional data or approvals, Teampay will automatically guide employees through that process.

Intelligent payments

Limit payments to pre-approved amounts tied to specific transactions or vendors to ensure that funds are only spent on approved types of physician payments. Approvers are alerted when an employee attempts to use a card for something other than the intended purpose.

One place to go

Track all spend—via physical cards, virtual cards, purchase orders and reimbursements—in one simple system for all employees, so all your compliance reports can be pulled right from Teampay.
