

Gain Critical Insights with Democratized Data and Reporting

Teampay's patented distributed spend management platform provides real-time insights into spend, with robust reporting capabilities including visibility into forward liabilities (committed spend) and budget tracking. Managers and employees are empowered with democratized access to their own spend data, eliminating the need to rely on Finance for actuals.

Actual Spend

1 Department is Marketing

2 Vendor is Facebook LinkedIn

3 Recurrence is All

Make better, faster decisions with actionable insights

Teampay's reporting provides real-time visibility into spend, with the ability to filter and drill down across multiple dimensions for any given time frame. Finance and managers can access the insights they need to identify spend patterns and trends, without having to manipulate data in Excel. And, employees love it because they have the power of pivot tables directly in Teampay. Because Teampay gives visibility into spend as it's occurring, instead of after-the-fact, Finance can prevent common problems like duplicate subscriptions.

Gain visibility into what's been committed

Teampay provides full transparency into future spend with purchases that have been approved but not yet paid. This includes purchase orders, upcoming subscription renewals, and card purchases that have been approved. Finance can compare actual spend against open commitments and spot trends to help with budgeting or forecasting.

Track spend against budgets

Teampay's budgeting tool allows you to better track and understand spending across the organization. Budget managers gain full visibility into what's been spent and committed for every budget set. Budgets can be created for any parameter(s) including departments, specific vendors, categories, and more. And, because employees can see how their purchase requests affect applicable budgets, everyone is enabled to make smarter spending decisions.
